

the fan. The spray mist **25** provides an evaporative environmental cooling for a user such as a user standing in front of the barbecue grill **50** as shown in FIG. 2. An edge of the extension on **31** can attach to an edge of the canopy shade **26**.

**[0059]** A program on the tablet **88** can activate the rotation of the fan blades **22**, provide the activation of the light **23**, provide the activation of water passing through the spray tubing **24** and provide an indicator based upon an output of a heat sensor **89**. The tablet **88** has a CPU that can monitor the status of the fan, light, photovoltaic charging, and water delivery through the spray tubing while having a programmed cooking schedule based upon heat sensor **89**. Thus, the tablet **88** provides an environmental control for both a user and cooking device.

1. A tablet docking station comprising:
  - a. a tablet dock configured for receiving a tablet;
  - b. an upper post extending from the tablet dock; and
  - c. an extension arm extending from the upper post, wherein the spray tubing is mounted to the extension arm, wherein spray tubing provides a water mist for cooling a user.
2. The tablet docking station of claim **1**, further comprising: a fan assembly including a fan housing, wherein the spray tubing has one or more spray outlets configured to provide a water mist for evaporative cooling of an area near a user.
3. The tablet docking station of claim **2**, further comprising: an electronic control for the fan assembly providing a fan control speed adjustable by a graphical user interface on the tablet.
4. The tablet docking station of claim **1**, further comprising: a canopy shade attached to the extension arm for shading a user.
5. The tablet docking station of claim **4**, further comprising: a photovoltaic element formed on an upper surface of the canopy shade, wherein the photovoltaic element provides an electric current for the tablet dock.
6. The tablet docking station of claim **1**, further comprising: an LED light mounted on the extension arm to provide light for a user.

7. The tablet docking station of claim **6**, further comprising: an electronic lighting control for the LED light, wherein the electronic lighting control is adjustable by a graphical user interface on the tablet.

8. The tablet docking station of claim **1**, further comprising: a heat sensor formed on a cooking device, wherein the heat sensor sends a temperature signal to the tablet.

9. The tablet docking station of claim **1**, further comprising: a niche that receives a tablet area for receiving a tablet.

10. The tablet docking station of claim **1**, further comprising: a tablet shade formed on the tablet dock.

11. The tablet docking station of claim **10**, further comprising: a fan assembly including a fan housing, wherein the spray tubing has one or more spray outlets configured to provide a water mist for evaporative cooling of an area near a user.

12. The tablet docking station of claim **11**, further comprising: an electronic control for the fan assembly providing a fan control speed adjustable by a graphical user interface on the tablet.

13. The tablet docking station of claim **10**, further comprising: a canopy shade attached to the extension arm for shading a user.

14. The tablet docking station of claim **13**, further comprising: a photovoltaic element formed on an upper surface of the canopy shade, wherein the photovoltaic element provides an electric current for the tablet dock.

15. The tablet docking station of claim **10**, further comprising: an LED light mounted on the extension arm to provide light for a user.

16. The tablet docking station of claim **15**, further comprising: an electronic lighting control for the LED light, wherein the electronic lighting control is adjustable by a graphical user interface on the tablet.

17. The tablet docking station of claim **10**, further comprising: a heat sensor formed on a cooking device, wherein the heat sensor sends a temperature signal to the tablet.

18. The tablet docking station of claim **17**, further comprising: a niche that receives a tablet area for receiving a tablet.
